

## MIXED DRUM

CHEMITOOL Mixed Drum is composed of Aluminium Oxide A + Non-Woven (Scotch) and is indicated for operations that require roughing and finishing in the same operation.

- ✓ **Flexibility**
- ✓ **Excellent adaptation to contours**
- ✓ **Cool grinding and low thermal load of the workpiece**
- ✓ **No tool clogging**
- ✓ **Highly resistant**
- ✓ **Long tool life**

CHEMITOOL Mixed Drum has mixed composition, interspersing Aluminum Oxide A and Non-Woven (Scotch) sanding flaps. The flap structure facilitates improved stock removal and achieves a coarser surface finish. Thanks to their flexibility, the flaps allow an excellent adaptation to the contours of the workpiece providing a superior and uniform surface quality.

Indicated for cleaning, roughening, deburring, surface work, structuring (matt finishing, brush matting and satin finishing) and fine grinding in multiple steps.

For the best results, we recommend using at a speed of 15-30 m/s. This provides an ideal compromise between stock removal rate, surface quality, thermal load on the workpiece and tool wear.

### Abrasives

Aluminium Oxide A + Non-Woven (Scotch)

### Suitable for

Aluminium, Brass, Copper, Nickel, Stainless Steel (INOX) and Titanium, Ceramic, Glass and Plastic

### Suitable Machines

Sanding Roller
