### INDICATIONS

The surface should be clean, dry and degreased.

Remove old and loose varnish, rust and sand the surface.

Apply a layer of primer suitable for the surface. After drying, sand the base coat (grain 600).

The spray must be at room temperature. The best temperature of use is between 15°C and 25°C. Before use, shake the spray can for 2 minutes and spray a sample. The distance to the surface to be treated should be approximately 25 to 30 cm.

### INSTRUCTIONS

Apply CHEMITOOL Acrylic Paint Spray in several thin layers and wait at least 5 minutes between each layer. Before applying the next coat, shake the spray can again.

After use, clean the valve (turn the can upside down and press the nozzle for approximately 5 seconds until only gas comes out).

The drying time depends on the room temperature, air humidity and thickness of the product applied.
