Our purpose is exclusively to guarantee the quality of the products in accordance with our standards.

CARE AND MAINTENANCE AND STORAGE

You should follow these instructions to ensure that your garments maintain their quality and **prolong their life**.

- Given normal wear and tear, to maintain the integrity and preserve the durability of the garment, it is necessary to take certain precautions in its management and use and to strictly observe the washing instructions on the inside label.
- Cotton garments tend to lose colour when exposed to sun and light, this happens, even more, when the garment is worn by workers who engage in strenuous physical activities that favour perspiration.
- During the first washes, it is natural for cotton garments to slightly reduce in size and even lose colour. It is therefore advisable to be very careful about washing temperatures, colour separation, use of suitable detergents and drying.
- Zips on clothing are tested by manufacturers through tensile testing to ensure strength during normal use.
- Frequent use of the parts, especially in the workplace, subjects the zip to considerable stress. To ensure its durability, it must be used correctly, especially in the presence of the double slider which works on a more delicate mechanism than the single slider. Forcing the zips alters the sliding mechanisms.
